

Weekly progress report			
Topic:	Chatbot – Final Project	Week No.	16
Course Code:	CSST101, CSST102	Term:	1st Semester
Course Title:	Advance Representation and Reasoning Basic Machine Learning	Academic Year:	2024-2025

Work Completed:

We have tested the chatbot using the test dataset the came with the dataset from hugging face and the final results was very underwhelming since its performance metrics came up low

Challenges Encountered:

We encountered the same problem like last week but instead of repeating the user input it tries to answer it but it keeps saying random nonsense that does not relate to the question the user inputted

Solutions Implemented:

We asked my classmate 'Mhar Andrei Macapallag' who is great at coding for help since I can't see what's wrong with my training code, he suggested that I should adjust the batch size.

Tasks for Next Week:

Train the chatbot again and try to make it functional and conversational
